

Mobile App Wireframing – Food Delivery App

1. User Research

Problem Statement

Users need a simple and efficient way to order food online from nearby restaurants.

User Needs

- Search for food items
 - Browse restaurant menus
 - Add food items to cart
 - Complete online payments
 - Track food delivery status
-

2. User Personal

Name

Rahul

Age

21

Occupation

College Student

Goal

To order food quickly and conveniently using a mobile application.

Pain Points

- Long waiting times
 - Complicated ordering process
 - Difficulty finding nearby restaurants
-

3. User Flow

Home Screen → Search Food → Restaurant Menu → Add to Cart → Checkout → Order Success

4. Wireframes

The following low-fidelity wireframes were designed for a Food Delivery Mobile Application:

1. Home Screen
 2. Search Screen
 3. Restaurant Screen
 4. Cart Screen
 5. Checkout Screen
 6. Order Success Screen
-

5. Design Thinking Process

1. Identified user needs and common problems in food ordering.
 2. Created a simple user flow for easy navigation.
 3. Designed low-fidelity wireframes to visualize the application structure.
 4. Focused on usability, accessibility, and user-friendly navigation.
 5. Created screens covering the complete ordering journey from browsing food to order confirmation.
-

Conclusion

This wireframing project helped in understanding user requirements, user flows, and the initial stages of mobile application design. The wireframes provide a clear structure for developing a user-friendly food delivery application.

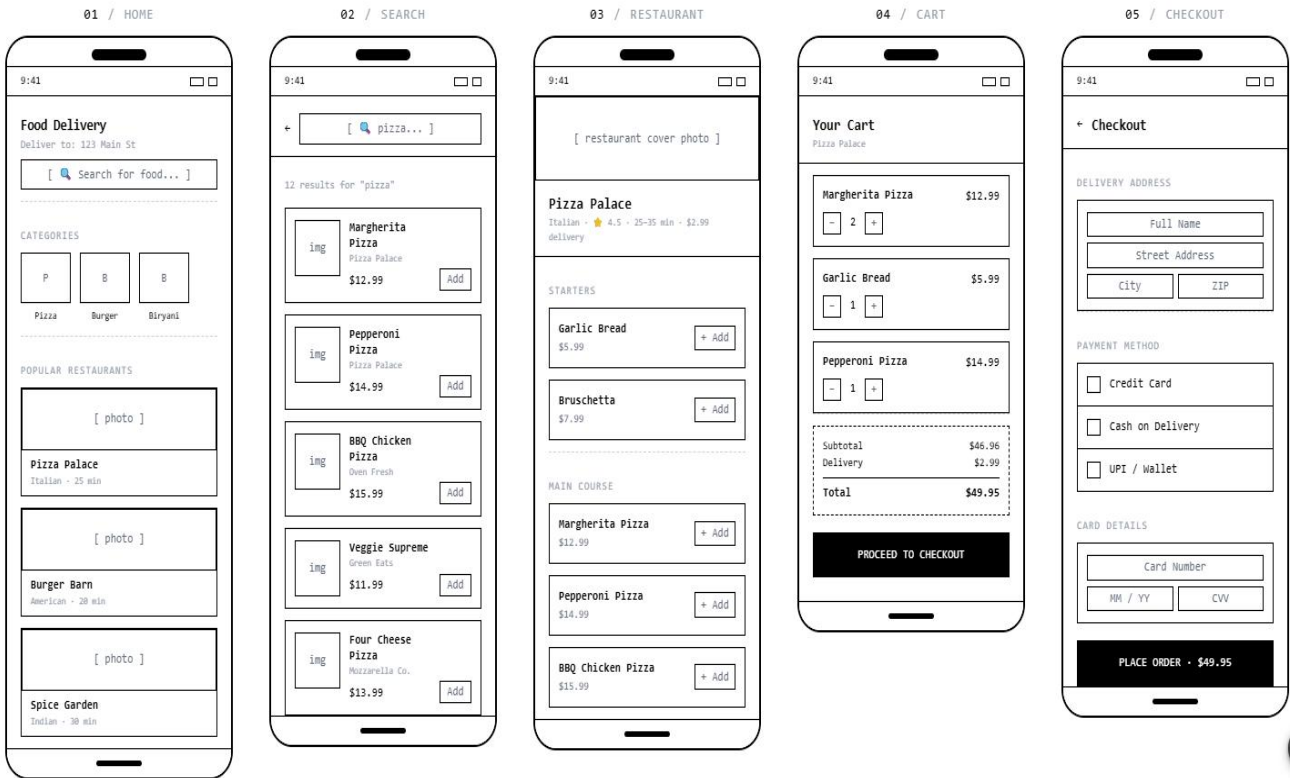

Output:

Food Delivery App

LOW-FIDELITY WIREFRAME • 6 SCREENS

UX FLOW DOCUMENT

USER FLOW: 01 HOME → 02 SEARCH → 03 RESTAURANT → 04 CART → 05 CHECKOUT → 06 SUCCESS

ANNOTATIONS

Screen 01 – Search bar triggers Screen 02. Category pills filter by cuisine type.	Screen 02 – Real-time search results. Each item links to its restaurant (Screen 03).	Screen 03 – '+ Add' appends item to cart. Cart badge appears in header.
Screen 04 – Quantity ± controls update subtotal. CTA navigates to Screen 05.	Screen 05 – Address fields are text inputs. Radio group for payment method.	Screen 06 – Track Order button navigates to live order status. Back to Home resets flow.

USER FLOW: 01 HOME -> 02 SEARCH -> 03 RESTAURANT -> 04 CART -> 05 CHECKOUT -> 06 SUCCESS
